

## **MULTI POSITION TAILGATE**

### **FOR DUMP TRAILERS**

#### **ABSTRACT OF THE DISCLOSURE**

A tailgate for a load carrying body, such as a dump trailer, is selectively openable to various positions, including left opening, right opening, swing up and swing down. Variable opening positions maximize flexibility for the owner/operator. A left or right swing opening is enabled by removable and storable hinge pins. An up or down opening is enabled by latches, which are openable and operate as hinges when closed.
